Function and system design

Measuring principle

Electronic measurement and conversion of input signals in industrial temperature measurement.

Application example TMT181

Measuring system

The iTEMP PCP TMT181 temperature head transmitter is a two wire transmitter with an analog output. It has measurement input for resistance thermometers (RTD) in 2-, 3- or 4-wire connection, thermocouples and voltage transmitters. Setting up of the TMT181 is done using the TXU10-AA configuration kit.
